Type: ROUTINE INSPECTION
Date: Sep-11-2013

3.125

FACILITIES, GENERAL.

a) Structural strength. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

***There is a 3 to 5 inch gap on a portion of an enclosure, between the front wall and roof panel, that houses a covered animal. The gap is wide enough for the animal to get a paw through. The gap should be reduced to minimize the risk of injury to the animal. ***

To be corrected by Oct 15, 2013

3.127 (d)

FACILITIES, OUTDOOR.

All outdoor housing facilities (i.e., facilities not entirely indoors) must be enclosed by a perimeter fence that is of sufficient height to keep animals and unauthorized persons out. Fences less than 8 feet high for potentially dangerous animals, such as, but not limited to, large felines (e.g., lions, tigers, leopards, cougars, etc.), bears, wolves, rhinoceros, and elephants, or less than 6 feet high for other animals must be approved in writing by the Administrator. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility.

***The perimeter fence in rear animal area has 1 to 4 feet high shrubs growing next to it. The shrubs lessen the effective height of the perimeter fence. There is also an area where a portion of an approximately 3 ft. broken tree branch is resting on the top of the perimeter fence and hanging down into the animal compound. The branch should be removed. The fence must be maintained in a way that does not diminish it's effective height.

3.131 (c)

SANITATION.

Premises (buildings and grounds) shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices set forth in this subpart. Accumulations of trash shall be placed in designated areas and cleared as necessary to protect the health of the animals.

There is an accumulation of both discarded and useful items being stored in an area adjacent to the food storage room. The items include: a hose, a tarp, cardboard, chairs, and training items. The area is unkept and cluttered. The presence of clutter can impede cleaning and attract rodents and other pests. A system should be in place and maintained to ensure premises are kept clean in order to protect the animals and to facilitate the prescribed husbandry practices set forth in this subpart.

To be corrected by September 20, 2013

An exit briefing was conducted with the owner.
